Cover Story

### New Technology Trend of Tyre Curing Bladder

Air bags were originally designed to cure tyres which used normal pressurized air or gas and are widely used now for curing bicycle and rikshaw (BC) tyres in Asia pacific countries and in a few cases for big size tyre as well.

Tyre curing bladders are made with specially made heat resistance compound and they are designed to be used in very high and sophisticated technology curing presses. A tyre curing bladder is accounted in the range of high technology product to suit high heat and flexes under heated environment and the compound therein.

### Interaction of Academic Institute with Industry Essential for R&D and Training & Skill Development

*The necessity and importance of interaction and exchange of ideas and views between the industry and academic as well as scientific institutions in India is very vital. It becomes obviously the moral responsibility of the research institutes to take up such research and development programme which would give a solution and assist to the constraints encountered by the respective industries.*

### Bonding with Employees – The Spirit of our Core Values

*One of the four core values of Garware Wall-Ropes states, "Enhance our family bond with the Employees and Business Partners through fair and equitable dealings as well as constant communication." Our employee engagement activities are directly linked with this value and every effort is made to live and upload it in action and spirit.*
